Davide Pintore

Senior Product Designer

"I design digital experiences that reduce complexity and respect how people actually work."

davidepintore@gmail.com · Italy, Treviso · LinkedIn · Dribbble · Behance

01 About Me

My path into design wasn't linear. I started with Computer Science, moved into Graphic Design, and eventually found my place in UX/UI. Each step added a piece I still use today: logic, visual sense, and empathy for the user.

I approach every project by listening first (interviews, observations, data), then defining the problem clearly before touching a single screen. I've learned that the fastest way to a great solution is rarely the most obvious one.

Currently, I contribute to Revolut's Business Platform, working on features that help businesses manage their money. I'm based in Treviso, Italy, and I'm always open to discussing new product challenges.

02 How I Work

I believe good design is evidence-based. My process follows a research-first approach:

1. **Understand** the problem, the users, and the context
2. **Explore** multiple solutions, not just the first one that works
3. **Validate** with real users before committing to a direction
4. **Iterate** based on what we learn, not what we assume

03 Skills & Areas of Expertise

UX Design
- User Research
- Wireframing
- Prototyping
- Usability Testing
- Information Architecture

UI Design
- Design Systems
- Responsive Design
- Interaction Design
- Visual Design

Development
- HTML
- CSS
- JavaScript
- Webflow
- Figma Dev Mode

Tools
- Figma
- Miro
- Notion
- Jira
- Maze

Methods
- Design Thinking
- Agile / Scrum
- Lean UX
- Heuristic Evaluation
- A/B Testing

04 Education & Certifications

1999 – 2005 · Modern Art Academy
Graphic Design & Visual Communication

2006 – 2009 · Metropolitan University
Computer Science

2023 · Nielsen Norman Group
Certified UX Specialist (CUX)

2024 · Interaction Design Foundation
Certificate in Advanced Interaction Design

2025 · IFA Innovation Arts Hub
Certificate in Human-Centered AI Design

05 Case Study: ClinicAnd

Product Designer · Freelance

"ClinicAnd – Validating an AI-built product through UX Research"

Prototyping · Usability Testing · Heuristic Evaluation · Interaction Design

ClinicAnd Prototype

Interactive prototype

Problem & Context

Clinic owners are overwhelmed by manual tasks and lack clear insights into their business performance.

Solution

An AI-powered platform that automates repetitive tasks and delivers actionable insights.

Research & Insights

Key user pain points identified
Clinic owners struggle with manual scheduling, lack visibility into performance, and waste time on repetitive tasks.

Actionable insights for AI and Design
Automation should reduce, not add, steps. Insights must be clear and actionable.

Information Hierarchy

Clinic Owner
- Dashboard
- Appointments
- Patients
- Staff
- Reports
- Settings

Staff

- Settings

Design Principles

Effective over efficient wins
Every feature must solve a real problem, not just look impressive.

Simplicity is a necessity
Every extra step is a reason to leave.

Clarity Wins
Every screen should answer one question clearly.

Trust Through Control
Users must feel in control of what AI does.

Less Automation, not AI
Automate only what users trust.

Accessibility Foundations
Design for everyone from the start.

06 Case Study: Fieldsheet

Product Designer · Freelance

"Fieldsheet – From Research to Working Product"

Research · Prototyping · Usability Testing · Design System

Fieldsheet Prototype

Interactive prototype

Problem & Context

Field workers lose hours every week to paperwork and fragmented tools.

Solution

A mobile-first platform that digitizes forms, tracks tasks, and syncs data in real time.

Research & Insights

Key user pain points identified
Workers struggle with duplicate data entry, lack of offline support, and no visibility into task status.

Actionable insights for AI and Design
Forms must work offline. Status updates should be automatic, not manual.

Information Hierarchy

Field Worker
- Dashboard
- My Tasks
- Forms
- Profile

Supervisor
- Dashboard
- Team
- Tasks
- Reports
- Settings

Admin
- Dashboard
- Users
- Forms
- Settings

Design Principles

Offline First
Work must never stop because of connectivity.

Minimal Taps
Every extra tap is friction in the field.

Clear Status
Always show what is done, pending, and overdue.

Role-Based Simplicity
Each role sees only what they need.

Trust Through Transparency
Supervisors must see what workers see.

Product Designer · Freelance

"Lume – Making Energy Bills Understandable"

Research · Prototyping · Usability Testing · Design System

Lume Mobile App
Interactive prototype

Lume Web Dashboard
Interactive prototype

Research Data

Interactive prototype

Key Insights

Users don't understand their bills. They want clear info in their own words.

Common Phrases
- "My bill is too high but I don't know why."
- "I pay more than I should and don't know how."
- "I'm not knowledgeable about energy."
- "I wish someone would explain my bill to me."
- "I don't know what to do to save money."

Sentiment Research – 17 Surveys

Positive	Neutral	Negative
23.5%	70.6%	5.9%
4	12	1

Insights
- People want to be more knowledgeable about energy.
- Bills are confusing and users don't know how to read them.
- Most ordinary people are lost.

What Users Need from Lume

Clear Explanations | Personalized Tips | Easy Comparisons | Simple Actions

Lume Interactive Prototypes

Interactive prototype

Profile & Overview

A clear overview of the user's energy data, their usage, and key insights. Designed to help users understand their consumption at a glance and quickly identify areas for improvement.

Dashboard

Real-time and historical energy data visualized through clear, readable charts — showing consumption patterns, peak hours, and cost trends so users can act on what matters.

Bill

Bill breakdown and comparison that breaks down costs into understandable components and helps users spot where their money is going each month.

Challenges

Lume's challenges are designed to help users reduce their energy consumption through practical, achievable tasks — turning abstract data into concrete actions that make a real difference.
